# Redwood

Redwood's rot resistant properties lend itself to exterior applications such as Brick, Stucco, and Siding Molds, as well as, Window Watertable, Window Sills, and Exterior Lattice work. Durable and said to be resistive to certain wood eating mites, Redwood is usually milled "green", which means a high moisture content. This often causes a darkening of the Redwood, in time, even blackening. It is important to paint or stain Redwood to keep a good appearance.
